

DEOSAN

Activate Barrier

AG216

Teat disinfectant post milking: Manual and (semi) automatic dipping

Description

Deosan Activate Barrier is a dark brown ready to use liquid gel, containing 3g/kg iodine for the disinfection of teats after milking.

Key properties

- BPR licensed
- Thickened gel formulation
- Highly visible, long lasting active film on the teats
- 10 % emollients

Benefits

- Delivers bacterial and yeasticidal activity to the highest standards
- Strong biocidal wide spectrum activity, highly effective in challenging environments
- Thickened formulation ensures total visible teat coverage in an easy one dip application
- Non drip formulation retains active ingredients on the skin and reduces waste
- Gives a long lasting protective coating to the teat skin
- Promotes excellent skin conditioning essential in extreme environmental conditions and stress points in lactation

Use instructions

Deosan Activate Barrier is ready to use dip only product.

Do not dilute before use.

Directly after milking each cow, cover the full length of each teat in Deosan Activate Barrier. To ensure sufficient contact time (5 minutes), care should be taken that the product is not removed after application.

For manual and semi-automatic dip applications.

Fill the teat dipping cup about two thirds full and replenish as necessary during milking. Dipping cups should be kept free of contamination during milking. Empty at the end of milking and thoroughly wash before refilling with fresh product.

Automated dipping equipment (e.g. hand held compressed air dippers) should be kept clean and well maintained. Where product is drawn directly from the drum, empty the contents completely before replacing with a new drum. Do not top up one drum with another.
