

Unique tool for highly effective dust mopping

Key advantages

- Excellent dust removal
- Superior manoeuvrability
- Simple handling

Benefits

- Cost-efficient and effective cleaning
- High m² coverage
- Ergonomic cleaning

The TASKI Lamello, a unique professional dust mopping frame, has especially been designed for the effective removal of dust. The mop frame includes unique vertical rubber black slides which maximise the dust pick-up and collection of the floor surface.

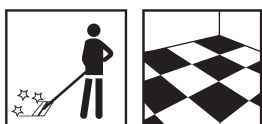

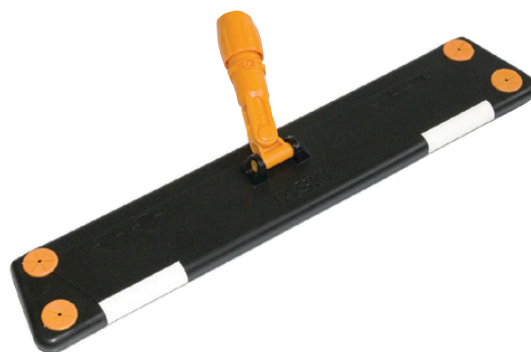

Thanks to velcro fasteners and quick snaps the floor dust cloths are quickly mounted and ready for use. The swivelling joint permits easy cleaning in recesses and corners.

Select the right cloth

Depending on dirt level, floor types and customer requirements either TASKI Florzip – a disposable dust cloth – or TASKI ortex – a reusable dust cloth – may be used with the TASKI Lamello dust mopping tool.

Application area

For the hygienic removal of dust and fine, loose dirt from smooth non-porous floors. Dust mopping with TASKI Lamello is recommended prior to damp or wet mopping, scrubber-drier cleaning or spray buffing for optimal cleaning results.

TASKI® **Lamello**
