

Chlorine Test Kit 10-200ppm

Test strips for determining the chlorine content of a chemical product solution

Description

The Chlorine ppm determination kit for chlorine in disinfectant solutions is manufactured with an improved paper, which gives instant readings.

The Chlorine ppm determination kit is supplied with the convenient dispenser that protects the paper and at the same time allows the user to tear off the desired size paper strip.

Use instructions

Take a representative sample of the sanitizing solution with the help of a beaker and proceed to make the measurement with the test strip.

Once the measurement has been taken, eliminate the sampled solution (do not reintroduce it into the solution used to disinfect the vegetables). When the indicator paper is dipped in the disinfectant solution, it produces an immediate color reaction.

This color should be compared with the colors in the reference table at different chlorine concentrations.

The points indicated on the color scale are for concentrations of 10 - 25 - 50 - 100 - 200 ppm free chlorine.

The Chlorine ppm determination kit consists of a dispenser with a color chart and a 15'x5/32" roll of indicator paper.

Each kit contains enough indicator paper to perform more than 150 tests.

Technical data

The above data is typical of normal production and should not be taken as a specification.

Environmental information

ISO 9.001 and ISO 14.001 certified company.
